

# Head of Software/Software Manager

## Job opening

---

### We measure what you see – and beyond!

Join us in our vision for delivering the best spectral imaging software and instruments to the world. Videometer is a world leading provider of spectral imaging technology, machine learning and AI software for analysis of a broad range of products. Our imaging instruments and turnkey solutions allow our worldwide customer base to see, detect, and measure product properties in an accurate, fast, versatile, and non-destructive manner. We can measure that food is safe to eat, that drugs are not counterfeit, and reveal otherwise hidden information in old historic documents.

You now have the chance to become part of an established, growth-oriented vision technology company with a very open-minded attitude. We are looking for a new Head of Software to manage our software development team, and thereby extend our software and analysis platform even further as well as bringing our services closer to the customer via cloud solutions. Videometer A/S is a Danish company based in Herlev, Copenhagen.

#### Job activities:

- You will become lead of a software team that creates the best spectral imaging software in the world.
- Managing a group of great team players developing and improving advanced software solutions implemented on a .NET and C# platform.
- Responsible for software roadmap planning, software architectural design, execution and follow up.
- Continuously reducing complexity and improving productivity in software development.
- You will be member of the Videometer management team, participating in making Videometer grow as a business and a great working place.

#### Your competences:

- Experienced in managing a software team, having inter- and intrapersonal skills.
- Experienced in C#, Version control (SVN/GIT) and software architecture, and automation (Devops).
- Experience with Azure cloud, databases, and IT security.
- A master's in software engineering, computer science or similar.
- Interest in image analysis and in creating world-class imaging applications and services.
- A customer-service and user experience oriented mindset.
- A passionate can-do attitude as a positive, open minded, and proactive team-player that likes to solve complex problems in collaboration with colleagues and customers.

#### We offer:

- A chance to join a company developing world leading spectral imaging instruments and AI software.
- Exciting interaction with application experts from food, agriculture, pharma, and cosmetics industries.
- An inspiring learning process every single day.
- We are all team-players, working together on the mission of creating outstanding solutions.
- Competitive reward package and a great working place, visit us at [www.videometer.com](http://www.videometer.com) .

Send your CV and application to [mail@videometer.com](mailto:mail@videometer.com) today!
