

C# software developer

Job opening

We measure what you see – and beyond!

Join us in our vision for delivering the best spectral imaging software and instruments to the world. Videometer is a world leading provider of spectral imaging technology, machine learning and AI software for analysis of a broad range of products. Our imaging instruments and turnkey solutions allow our worldwide customer base to see, detect, and measure product properties in an accurate, fast, versatile, and non-destructive manner. We can measure that food is safe to eat, that drugs are not counterfeit, and reveal otherwise hidden information in old historic documents.

You now have the chance to become part of an established, innovative vision technology company with a very open-minded attitude. We are looking for more colleagues in our software development team that can help us extend our software and analysis platform further as well as bringing our services closer to the customer via cloud/edge solutions. Videometer A/S is a Danish company based in Herlev, Copenhagen.

Job activities:

- Designing and implementing advanced software solutions on a .NET and C# platform.
- Implementing state-of-the-art imaging algorithms interfacing with hardware, sensors and robotics.
- Continuously reducing complexity and improving productivity in software development.
- As software developer in Videometer you will be part of a team that creates the best spectral imaging software in the world.
- Making Videometer grow as a business and a great working place with superior customer satisfaction.

Your competences:

- About 5 to 15 years of experience with several of the following topics:
 - C#, .NET, WPF, GIT, Devops and software architecture.
 - Cloud/edge computing, Azure cloud and databases.
- A real software magician - bachelor/master's in software engineering, computer science or similar.
- Interest in image analysis and in creating world-class imaging applications.
- A customer service and user experience-oriented mindset.
- A passionate can-do attitude as a positive, open minded, and proactive team-player that likes to solve complex problems in collaboration with colleagues and customers.

We offer:

- A chance to join a company developing world leading spectral imaging instruments and AI software.
- Exciting interaction with application experts from food, agriculture, pharma, and cosmetics industries.
- An inspiring learning process every single day.
- We are all team-players, working together on the mission of creating outstanding solutions.
- Competitive reward package, flexibility, and a great working place, visit us at www.videometer.com

Send your CV and application to mail@videometer.com today!
